DARK HORSES AT OLYMPIC GAMES

Some Surprises Are Looked for From Austria and Hungary.

U. S. EXPECTED TO WIN MOST EVENTS

Others Concede That the Honors Will Be Shared With Great Britain—Enormous Stadium to Hold 70,000 People Is Nearly Completed.

It is conceded that the United States and Great Britain will undoubtedly share the honors in the coming Olympic games at London. In fact, many experts think that the Americans will carry off most of the events, as they did at Athens in 1896, while the English will come second, France, owing to her recent victories in cross-country and track athletics over good British teams, is expected to win some points. Then comes the question: Will the athletes from the other nineteen competing nations be a caliber to occasion a surprise? Are there any "dark horses" among them?

Sweden, whose representatives did comparatively well at Athens, has undoubtedly some good men. One of her best hurdlers won the 110-yard hurdle race at the last English championships in good time, which he has improved since. In the five miles and the Marathon race the Swedes ought to win points, and possibly in the pole-vaulting competition.

Belgium will be more fully represented this year than at the last international games. She has a long jumper, who is a first-class man; also a couple of young sprinters.

Two clubs in the little kingdom have been doing their utmost of late to promote the sport and science of running, the Racing Club de Bruxelles and the Union St. Gilloise. They have particularly tried to improve the standard of Belgian long-distance men, but seem to have failed, for in the recent triangular meet between England, France and Belgium, the last named were outclassed by the two larger nations.

Dark Horse Competitors.

The countries whose teams may furnish the "dark horses" are Austria and Hungary. Both have taken kindly to out-of-door exercises, owing, no doubt, to the mixed blood of the population. In Vienna there is one of the finest clubs in Europe, to which most of the aristocracy belong. This is the Cricket and Football Club of Vienna, originally founded by Englishmen, but now a wholly national society. In Budapest is the Magyar Athletic Club, formed of members of Magyar blood and language, while in Prague is the Slavia Athletic Club.

Germany has one good sprinter, Duncer, but otherwise the athletes seem to have runners of even moderate class.

The Greeks may score in the discus throwing events and strength trials. Italy has one or two fairly good long-distance men and might earn a place in the Marathon race.

Keyser, of the Racing Club de France, recently defeated Underwood, the English cross-country champion, over a ten-mile course, coming in easily and not particularly fatigued. This net, coupled with other victories of the Gaelic distance runners, argues ill for the British representatives in the long races at London.

Tom Longboat will go to England to represent Canada in the twenty-five-mile Marathon race in suite of A. A. U. competition. In order that they may have in their hands documentary evidence of the Indian's purity, the Canadian Olympic Committee asked the C. A. A. U. for a report upon the Indian's whole career. The report says that after rightly investigating all affairs and connections of the Indian, the committee was unable to discover that he has profited in the slightest degree in any way from athletics.

Enormous Stadium Built.

The council of the British Olympic Association, which is almost entirely composed of representatives appointed by the governing associations of sports in Great Britain, has contracted with the Franco-British Exhibition to erect on the exhibition grounds a stadium capable of accommodating 70,000 spectators. This was begun in September last and is now rapidly approaching completion. Surrounded by trees of scale in a huge grass plot 235 yards in

length and just under 100 yards in width. Round the edge of this arena is a cinder running path of three laps to the mile, laid out under the superintendence of the Amateur Athletic Association, and outside this again is a cycling track, two and three-quarter laps of which go to the mile. On the grass plot itself, which will be available for every kind of athletic exercise, and immediately in front of the royal boxes, is an enormous swimming tank, 327 feet long by 50 feet broad. Over most of the surface of this the water has a depth of only four feet six inches, but a square section in the middle is carried down fourteen feet six inches. This part is intended for high diving competitions and a moveable tower platform is to be provided for the purpose.

The games, which are expected to attract the greatest athletes in the world, will be divided into two parts—the main Olympic games, beginning July 13th, and the winter games, opening October 19th. The Marathon race must necessarily take place outside, for the greater part of its course, only the finish of the twenty-five miles being visible to the spectators in the arena. This long-distance run was originally set for Saturday, July 25th. The event has been moved forward one day and will be held Friday, July 24th. The reason given officially for this action is that two weeks of athletics will be completed on July 25th, and it was thought better to move the running of the Marathon forward one day in order that such an important event should not become the tail-end of an already long program.

AMERICANS FAILED TO SAVE DAY AT OXFORD

BY RICHARD DAHLGREN.

LONDON, April 10.—Cambridge is jubilant, and why not? Not only has she beaten her historic rival on the water in the great inter-variety race, but she has beaten her in the inter-variety field and track athletic meet.

It was believed that, through the infusion of new blood into Oxford, by way of the Rhodes scholarships, that Oxford's supremacy in this line of sports was established for a long time, but when points were counted, Cambridge had won six events, while but four were credited to Oxford. It was a close thing at that.

The favorite for the 100-yard dash was L. C. Hull, of Michigan, whose college is Brasenose, Oxford. This young American, who is reported to have done the distance in ten seconds, was defeated by two feet by MacLeod, of Cambridge, whose time was 10.2-5 seconds. Had Hull been up to form the games would have been a tie.

A. M. Stevens, of Yale and Oxford, again demonstrated that America can give Englishmen points in the art of throwing the hammer. His throw was 138 feet 8 inches, which was 19 feet 2 inches more than his nearest competitor, Irwin, of Cambridge, could manage.

The result of the boat race was not unexpected. The general opinion among experts was that Cambridge had the better crew, and the race proved that in this case, at least, expert opinion was correct. It was a pretty race from start to finish. On the third time in succession that Cambridge has won, but she is still behind on the series.

A story has been current, that the Cambridge crew was saved from an

epidemic of influenza by the free use of oranges, and it was commonly reported that the crew had trained on oranges.

A disgruntled American who had a bet on the losing crew, with this story in mind, remarked, rather bitterly after the race: "Huh! Oxford must have trained on lemons."

While Tommy Burns has defeated one after another of the British heavyweights with an ease which has been painful to the British public, his visit will have one good effect. It has aroused interest in boxing throughout the length and breadth of the land, and as a result England, in the next generation of boxers, will produce a real fighting champion.

Eugene Corri, one of the best-known authorities on the sport in England, talking on the subject of the Americans' great superiority over the pick of the British boxers as represented by Palmer, Mol and Roche, says: "There is no doubt that it has given boxing over here a big lift. In the army and navy especially they are keen to find a really good heavy-weight."

"I was down at Portsmouth recently judging some contests, and can say that no one is keener in this than Commander Watson, of the Royal Naval Barracks there, or Lieutenant Forster, of the Irish Guards. At the National Sporting Club, too, good work is being done under Mr. Bettinson. We had more competitions this winter than ever before."

"Personally, I think it will be in the navy that a man or men will be found, and Commander Watson, I am sure, means to go on trying until he succeeds. As it is, monthly competitions are now being held in all navy

stations in the South, special attention being paid to any man who shows promise."

"It is a very great pity that boxing is not to be included in the Olympic games. It certainly has far more claim to be in the program than some of the sports which are included there."

"Do I think the American style will be adopted here? Yes, certainly. We shall have to do it."

In the death of St. Gurin, the British turf loses a horse which has produced more great race horses than any other on the turf in recent years. A great racer himself, he had the faculty of transmitting his speed and stamina to his progeny in marked degree. It seems odd that his death and the death of his great son, Persimmons, should have come so close together.

A great racer himself, he had the faculty of transmitting his speed and stamina to his progeny in marked degree. It seems odd that his death and the death of his great son, Persimmons, should have come so close together.

In the death of St. Gurin, the British turf loses a horse which has produced more great race horses than any other on the turf in recent years. A great racer himself, he had the faculty of transmitting his speed and stamina to his progeny in marked degree. It seems odd that his death and the death of his great son, Persimmons, should have come so close together.

MONOGRAMS FOR TENNIS PLAYERS

[Special to The Times-Dispatch.]

CHAPEL HILL, N. C., April 11.—At a meeting of the Athletic Association held in Gerrard Hall last night a committee that had been appointed to look into the advisability of awarding North Carolina sweaters to varsity tennis players brought in a favorable report, recommending that a white sweater with an N. C. monogram on the right side be awarded.

The matter of establishing the office of athletic publicity agent was taken up, and after some discussion it was unanimously decided to establish such an office. The duty of this officer will be to bring to the attention of the prep school athletes of the State the advantages of the university from an athletic point of view.

Carolina has been invited to send representatives to the Southern intercollegiate tennis tournament to be held in Atlanta May 11th, 12th and 13th. A large number of Southern Colleges will be chosen as officers of the association for the following year, Messrs. Hubert Poter and E. H. Earnshaw, of Wake Forest College, are president and vice-president, respectively, and inasmuch as Carolina won the meet with these gentlemen last fall it is to be hoped that she will send representatives.

"Bull" Thompson, known throughout the South as one of the best all-around athletes Carolina has even produced, has signed up for the coming season with Wilson, Eastern Carolina League
